DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 02/24/2002 partial not consider (ref. AC and AD) because it fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "permanent magnet" and "an adhesive" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities: in page 3, line 5, the phrase "the method of claim 1" should be removed.

Art Unit: 2834

Appropriate correction is required.

4. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Ozawa et al. (JP409219946A).

Regarding claim 10, Ozawa et al. disclose a rotor (31,fig. 10) for a permanent magnet motor, the rotor comprising: a rotor shaft having: a working region (see region 34) for delivering mechanical energy; and a rotor region (see region 34e) arranged coaxially with said working region, said rotor region having a rotor region surface having a rotor region surface cut (34e) therein; and a permanent magnet (33) arrangement coupled by an adhesive to said rotor region of said rotor shaft for facilitating conversion of electromagnetic energy to mechanical energy,

Art Unit: 2834

adhesion (14) between said permanent magnet arrangement and the rotor region surface being enhanced by the rotor region surface cut.

Regarding claim 10, Ozawa et al. disclose the rotor region surface cut is a continuation of a working surface region cut.

Regarding claim 10, Ozawa et al. disclose the working region of said rotor shaft has a threaded portion, and the working region surface cut is a first cut pass of the threaded portion of the working region of said rotor shaft.
